

NOTICE Reduce nozzle/firing rate when required – Maximum burner capacity is reduced when overfire pressure is positive and for altitudes above 2,000 feet. See below and adjust firing rate/ nozzle selection if necessary.

702— Maximum firing rate for positive overfire pressure and high altitude	
Overfire pressure (Inches w.c.)	Gas – MBH
0.00	1,600
0.10	1,530
0.20	1,500
0.30	1,480
0.40	1,440
0.50	1,430
0.60	1,390

Altitudes: For altitudes more than 2,000 feet above sea level, reduce the above capacities an additional 4% per 1,000 feet higher than 2,000 feet above sea level.

D-Rate Supplement for 702GAS Burner
